

FERC and NERC Release Joint Report on Cold Weather Event

July 18, 2019

Saint Paul, MN. The Federal Energy Regulatory Commission together with the North American Electric Reliability Corporation released today a joint report from the inquiry into the cold weather event that happened in the Midwest and South Central U.S. region of the United States in January 2018. The report again stresses the need for generation owners and operators to adequately prepare for winter weather conditions to ensure bulk electric system reliability.

###

Midwest Reliability Organization (MRO) is a non-profit organization dedicated to ensuring the reliability and security of the bulk power system in the central region of North America, including parts of both the United States and Canada. MRO is one of six regional entities in North America operating under authority from regulators in the United States through a delegation agreement with the North American Electric Reliability Corporation (NERC) and in Canada under similar arrangements. The primary focus of MRO is developing and ensuring compliance with reliability standards and assessing the grid's ability to meet the demands for electricity.
