

MRO Publishes 2019 Regional Risk Assessment

January 10, 2019

SAINT PAUL, MINN. MRO recently concluded the development of the 2019 MRO Regional Risk Assessment (MRO RRA). The MRO RRA reflects the collaborative work of MRO stakeholders, E-ISAC staff and MRO staff. It is developed annually in support of the Compliance Monitoring and Enforcement Program Implementation Plan (CMEP IP), and identifies risks specific to the MRO footprint that could potentially impact the reliability of the bulk power system, as well as the ongoing work by MRO stakeholders to improve reliability, security, and resiliency.

The MRO RRA focuses on regional characteristics, including geography and interconnectivity, operational, planning, security, and compliance trends, and emerging risks. It is a narrative risk report and includes updated 2019 MRO Performance Areas.

Both the [2019 RRA](#) and the [2019 MRO Performance Areas](#) are now available on MRO's website.

To learn more about MRO, visit the [newsroom](#) on our website.

Midwest Reliability Organization (MRO) is a non-profit organization dedicated to ensuring the reliability and security of the bulk power system in the central region of North America, including parts of both the United States and Canada. MRO is one of seven regional entities in North America operating under authority from regulators in the United States through a delegation agreement with the North American Electric Reliability Corporation (NERC) and in Canada under similar arrangements. The primary focus of MRO is developing and ensuring compliance with reliability standards and assessing the grid's ability to meet the demands for electricity.
