

MRO RAC to Host CAPX2050 Webinar

July 14, 2020 | 10:00 – 11: a.m. Central

Event Details

MRO's Reliability Advisory Council (RAC) is pleased to announce it is hosting a CAPX2050 Webinar. Upper Midwest generation fleet is amid a fundamental transformation. In the next decade, approximately 50 percent of the dispatchable generating resources are expected to retire, with plans for these resources to be replaced primarily with wind and solar resources. This webinar will review the "CapX2050 Transmission Vision Report," which is intended to educate and inform Upper Midwest policymakers and stakeholders on the implications of a future that is more reliant on non-dispatchable resources. The challenges discussed will help stakeholders identify and implement solutions that enable the generation fleet to transition in a reliable, affordable, and safe manner.

Presenter

- Andrew Siebenaler, Manager, Regional Transmission Planning and Analytics, Xcel Energy
- Matthew Ellis, Regional Transmission Program Manager, Great River Energy

Registration

To register for this webinar, please click [here](#). Registration closes on **July 10, 2020**. WebEx information will be provided to all registrants the day before the meeting.
