

# MRO Security Advisory Council to Host Upcoming Webinar

## Learning from Cyber Security Close Calls

**December 5, 2018 | 10:00 a.m. to 11:00 a.m. Central**

### Webinar Details:

MRO Security Advisory Council (SAC) is pleased to announce that it is hosting a webinar on Learning from Cyber Security Close Calls. Our co-workers in safety have well-vetted processes to analyze close calls in order to improve safety. This presentation will discuss taking that concept in conjunction with the Cyber Kill Chain to learn from Cyber Security Close Calls. This presentation will show how we can use such cases to determine what improvements can be made to help detect the attacks earlier in the Cyber Kill Chain. This presentation will also show how a slight modification to a close call could bypass existing security, allowing us to determine what can be done to detect and prevent similar attacks that might come in the future.

It can be unnerving to watch an attack get past security measures designed to protect an organization, but what can be learned from these exercises is invaluable. They can help the entire organization understand the importance of having multiple layers of security and tuning different layers to mitigate weaknesses in others to avoid close calls and successful attacks.

### Presented by:

Lance Rudolph, Senior IT Security Analyst, Alliant Energy

### Registration:

To register for this webinar, [click here](#). Registration closes on **December 5, 2018**. WebEx information will be provided to all registrants the day before the meeting.
